Clever use of motorised ZIP® blinds to provide dim-out to bedrooms in open plan apartment

Two 3.5m x 1.8m SHY® ZIP® motorised radio controlled blinds

Product

SHY® ZIP® blinds

Operating Method

Motorised with radio control

Dealer

Deans Blinds and Awnings

Where

London

This large open plan apartment in a converted Victorian school had two bedrooms on a mezzanine floor with glass balconies overlooking the ground floor some 6m below.

The challenge for Deans Blinds & Awnings was to provide privacy and black-out to these bedrooms but to allow the light to flood into the apartment during the day.

Deans created a timber structure which housed two 3.5m x 1.8m SHY® ZIP®

motorised radio controlled blinds so they could be raised and lowered simply from either the bedrooms or the ground floor.

The headbox and side channels of the blinds were powder coated in white to help them blend into the surroundings when fully raised but the fabric was much more of a statement. Mermet Flocke full black-out fabric was specified by the client which is white on the reverse but coloured on the front face. The colour chosen on this project matched artwork in the apartment.
