1m x 35m  
covered in  
just 4 blinds

## Product

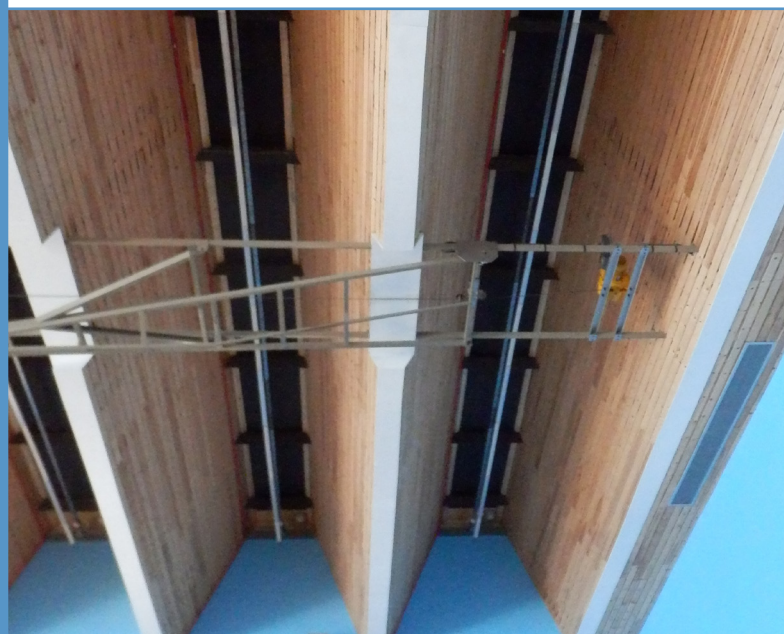

Fabric Tension System (FTS)

## Operating Method

Motorised with radio control

## Where

University of Bath

When you have a gym it's good to have natural light, but when you want to use the space for meetings and conferences you need to control that light. This multi-use space at the University of Bath therefore needed effective dim-out blinds to the 10 rooflights.

Each rooflight measured only 1m wide but 35m long and there was a further requirement for the retracted blinds to be imperceptible from floor level.

SHY (UK) built special headboxes in pine faced ply and used pine timber supports for the side channels so the blinds blended into their surroundings when not in use.

Each rooflight was covered by two pairs of FTS blinds with each pair designed to neatly meet over a structural beam.

The blinds were operated using a multi-channel radio handset so each bay could be controlled independently.

SHY (UK), 1 Bilton Road Industrial Estate  
Cadwell Lane, Hitchin, Herts. SG4 0SB.
