the complete service from SHY® (UK)

Sloping, motorised blind 26 square metres - standard from SHY® (UK)

Product
Fabric Tension Systems (FTS)

Operating Method
Motorised with radio control

Dealer
PCMS Limited

Where
Clerkenwell, London

SHY® (UK) don't just make commercial roller blind systems, they offer a complete service, from technical assistance through to design, manufacture and testing.

Proof positive of this service was an interesting commercial office job in London, fitted by SHY® (UK)'s dealer PCMS Ltd with the help of installation expert BBD Ltd.

With sloping glazing, the largest of which was 3.5m wide and up to 7.5m drop SHY®

(UK) proposed their fabric tension system (FTS). The FTS cleverly adjusts the tension in the fabric during its travel, and when the blind is stopped or fully deployed the motors gently turn in opposite directions to remove any sag.

Tensioned blinds of this size need a very strong and structurally stable fabric and SHY® (UK)'s S150 fibreglass screen fabric, in white, with a 5% openness and a light transmittance (Tv) of just 15% was specified at this site.

SHY (UK). 1 Bilton Road Industrial Estate
Cadwell Lane, Hitchin, Herts. SG4 0SB.
