

Disappearing blinds from SHY®

It is often said with conservatories that the last thing you think about is the blinds. This was not the case when Ace Contracts were asked to provide roof blinds for a bespoke conservatory and turned to SHY® (UK) for some help.

SHY® can make roofblinds up to 49m²

Product

SHY® ZIP® Rooflight blinds

Operating Method

Motorised, radio controlled

Dealer

Ace Contracts

Where

London

Neat headboxes to conceal the roller are built into the design of SHY® (UK) roofblinds and clever ZIP® slimline channels support and guide the fabric as it travels across the glazing. And the motors for the blinds are even fully concealed in the roller barrel too.

A high performance and extremely robust screen fabric was used in these blinds to reduce heat gain and

control glare and all the aluminium hardware in this installation was powder coated to match the frame colour of the conservatory.

Conservatories are typically a much smaller application of roofblind technology from SHY® (UK) but with six headboxes and 7 roller barrel sizes as standard most shapes and sizes are possible.

SHY (UK). 1 Bilton Road Industrial Estate
Cadwell Lane, Hitchin, Herts. SG4 0SB.
