

When the Standard Solution is just "Not Acceptable"

This job shows the ingenuity of SHY® (UK)'s engineering when coupled with an installer with a vision and the technical aptitude to take on a real challenge.

Shaped, curved, motorised, lifting blinds. Impossible for some, standard from SHY®

Product

SHY® SUNFACTA® shaped blinds

Operating Method

Motorised, radio controlled

Dealer

Incorporated Blind Systems Limited

Where

Glasgow

Glasgow City Council needed to control the amount of light ingressing through a cupola some 10.5 metres in diameter and rising to a height of 4.5 metres. However, they also wanted to preserve the aesthetic integrity and so, with SHY® (UK)'s help, Incorporated Blind Systems Ltd proposed twelve shaped and curved blinds to fill each glazed panel individually.

SHY® (UK) used a black-out material and installed motors within the barrel of the

blind. To raise and lower the blinds a system of pulleys and a relieving roller were deployed but hidden from view. All blinds were programmed to operate together by means of a radio controlled switch.

This installation so impressed the operators of the Trafford Centre in Manchester that their 45 metre diameter cupola has had the same solution installed.

SHY (UK). 1 Bilton Road Industrial Estate
Cadwell Lane, Hitchin, Herts. SG4 0SB.
