

Shaped and lifting

A new school gym had some standard windows and shaped glazing above a door but there was a requirement for the space to have a black-out facility.

Shaped, motorised and pulling upward. Another SHY® (UK) bespoke solution

Product

SHY® ZIP® blinds

Operating Method

Motorised with radio control

Dealer

Labetts Blinds

The standard windows were easy to solve with a standard SHY® ZIP® blind but the shaped glazing was slightly more of a challenge and Labetts Blinds sought SHY® (UK)'s expertise.

In the end the solution was simple. The top of the blind had a hem bar fitted which reflected the angle of the glazing and this was attached by a discrete stainless steel cable to a pulley fitted at the top of the window.

At the base of the glazing a motor did all the work – raising and lowering the blind effortlessly.

To guide the blind and maintain high levels of light exclusion ZIP® side channels were used as normal on any SHY® ZIP® blind.

All blinds were controlled by a radio controlled handset.
