

# Superb shading in suburbia by SHY®

Why have blinds if you can't see out and why fit inside when you can have the benefit of extra solar protection from external blinds?

External and sloping is no problem for SHY® ZIP®

## Product

SHY® ZIP® blinds

## Operating Method

Motorised with radio control and protected by a wind sensor

## Dealer

Incorporated Blind Systems Limited

## Where

Manchester

Now available with obstacle detection motor technology

External shading is typically far more effective at keeping a building cooler as it blocks unwanted heat before it hits the glazing. Such shading solutions are not typical in the UK but are efficient and can be elegant too as this project proves.

On the outskirts of Manchester this house has the benefit of a full height glazed extension to add space, light and provide a panoramic view. But

with so much glass there was a need to control glare and thermal gain. Given the challenge the obvious solution was a SHY® ZIP® Screen blind fitted externally with an open weave fabric.

Electrically operated with automatic wind sensor protection this installation shows SHY® ZIP® Screen is just as happy outside as in.

SHY (UK). 1 Bilton Road Industrial Estate  
Cadwell Lane, Hitchin, Herts. SG4 0SB.
