

It's a shading education from SHY[®], A to ZIP[®]

'A' level buildings, like the multi-functional auditorium at the superb new Newcastle-under-Lyme College needs 'A' level shading.

SHY[®] ZIP[®] - small or large, manual or motorised, screen or black-out

Now available with obstacle detection motor technology

Product

SHY[®] ZIP[®] blinds

Operating Method

Motorised with radio control

Dealer

Incorporated Blind Systems Limited

Where

Newcastle-Under-Lyme, Staffordshire

A new auditorium at Newcastle-under-Lyme College had an interesting array of windows on a curved wall.

As the auditorium was a multi-use space with the need for total light control a dim-out solution was required. But due to the height and position of the windows the blinds had to be motorised and be a durable and reliable solution.

SHY[®]'s dealer, IBS, specified the ZIP[®] Screen dim-out solution with black

headboxes, channels and hem bars with a cloth that is both blackout and flame retardant.

Most of the windows were relatively small in terms of drop but the main section of glazing required a blind of 2,550mm wide and 2,800mm drop.

To minimise the amount of surface wiring and to make the solution simple to operate by the client radio controlled motors were used.

SHY (UK). 1 Bilton Road Industrial Estate
Cadwell Lane, Hitchin, Herts. SG4 0SB.
