Now available with obstacle detection motor technology

## Product

SHY® ZIP® twin blinds

## Operating Method

Motorised with links to AV system

## Dealer

Volvina

## Where

Milton Keynes, Buckinghamshire

Twin blinds provide the ultimate in light control as in this job for a University expertly installed by SHY® (UK)'s dealer, Volvina.

SHY® (UK)'s twin blinds contain two barrels and their own cloths but contained in one headbox and in this case there were even two sets of side channels so the blinds were permanently guided along their travel.

Typically, as at this site, the twin concept allows for a screen fabric to filter the light and a blackout fabric to provide the ultimate in light control. Either blind can be positioned

independently of each other making this probably the most versatile form of window shading.

These twin blinds were motorised with the black-out blinds linked to the AV controls on a lectern and the screen blinds operated by radio control handset.

The blinds were approximately 3,000 x 2,575mm and all hardware was powder coated to match the window mullions.

The personification of bespoke.

SHY (UK). 1 Bilton Road Industrial Estate  
Cadwell Lane, Hitchin, Herts. SG4 0SB.
