

Shading by Degrees

Providing extensive and efficient shading at Reading University with first class results

Screen fabric to preserve external view but control glare

Product

SHY® ZIP® blinds

Operating Method

Standard and heavy duty side chain operation

Dealer

Volvina

Where

Reading University, Berkshire

This project shows the versatility of SHY® (UK)'s product range with differing fabrics, operating methods and hardware colours.

The majority of the roller blinds were fitted with a robust screen fabric with a 5% openness and operated by a standard side chain.

In some areas the overall blind size meant a heavy duty side chain operation was required. With this system a spring contained in the roller barrel of the blind

is charged when the blind is lowered so assisting the user when the blind is raised.

In the majority of rooms the hardware of the blind (headbox, side channels and bottom rail) were powder coated to a specific RAL colour as requested by the client.

A phased project over two years, this job was expertly managed by SHY® (UK) dealer Volvina providing all technical and installation resources.

SHY (UK). 1 Bilton Road Industrial Estate
Cadwell Lane, Hitchin, Herts. SG4 0SB.
