

# Lecture Theatre Black-out

The School of African and Oriental Studies needed to provide an effective black-out to large windows in teaching areas

Gear operation to effortlessly raise and lower the blind

## Product

SHY® ZIP® blinds

## Operating Method

Gear operation

## Dealer

Flamingo Blinds

## Where

School of African and Oriental Studies, London

At this site some of the windows could be opened and this can be a problem with some black-out blinds as the fabric can get sucked out of the channels.

But SHY® (UK)'s pioneering ZIP® technology means that the fabric is always securely held in the side channels but still allows the blind to raise and lower as normal.

As the openings at this site were relatively large SHY® (UK)'s dealer,

Flamingo Blinds, decided to install SHY® ZIP® blinds with gearbox operation. In this configuration a gearbox is fitted to one end of the roller barrel and is then operated by a crank handle to raise or lower the blind.

This makes the blind very easy to operate and it is ideal for high use environments and with large or high level blinds. An added advantage is that it contains no cords or chains and so is inherently child safe.

SHY (UK), 1 Bilton Road Industrial Estate  
Cadwell Lane, Hitchin, Herts. SG4 0SB.
