

Tales of the riverbank

Full width horizontal rooflight blind elegantly controls light and heat gain in riverside house extension.

Clever system ensures fabric remains taut at all positions of the blind

Product

SHY® ZIP® FTS blinds

Operating Method

Motorised with remote control

Where

Berkshire

The owners of this home wanted to capitalise on their location next to the river Thames in Berkshire. A new fully glazed extension with a flat glass rooflight helped to flood the space with natural light and make the best of the view.

SHY proposed the SHY® ZIP® Fabric Tension System (FTS) with 150mm² headboxes to conceal the cloth rollers and motors. This system has motors positioned at both ends of the

blind and when it is stopped in any position they gently turn in opposite directions to keep the fabric taut.

In this installation, expertly carried out by BBD Ltd, the headboxes were built into the ceiling detail under the rooflight with access panels for maintenance and the 1.8m x 6.2m blind is operated by a Lutron home control system. Fabric was Solarscene S110 with 5% light transmission.

SHY (UK). 1 Bilton Road Industrial Estate
Cadwell Lane, Hitchin, Herts. SG4 0SB.
