

Twins - just got bigger

Two blinds in one headbox is quite unusual. But unusual is usual at SHY® (UK) and they even make twin blinds for vertical, sloping and even horizontal glazing.

Screen blinds fully lowered and black-out blinds partially lowered. The ultimate in light control

Now available with obstacle detection motor technology

Product

SHY® ZIP® twin blinds

Operating Method

Motorised with radio control

Dealer

Incorporated Blind Systems Limited

Where

Borders, Scotland

Using a 200mm x 200mm headbox to fully contain the barrel, motors and rolled up cloth it is possible to have a twin blind up to 4,400mm wide or 3,800mm drop.

Usually a screen or shading fabric is used on the front blind and a black-out fabric on the blind nearest to the glazing.

Both blinds are motorised and can obviously be operated independently

of each other - giving the ultimate control over light.

With an extensive range of flame retardant fabrics, control options (both blinds are usually motorised, but can be operated by winding handle (gear operation) and even powder coating to any BS/RAL colour SHY® (UK)'s twin blinds are more than double the benefit.

SHY (UK). 1 Bilton Road Industrial Estate
Cadwell Lane, Hitchin, Herts. SG4 0SB.
